SUMMARY

Detail-oriented professional with hands-on experience coordinating IT assets, user accounts, and support tickets in a fast-paced enterprise environment. Experienced planning, scoping, and delivering software projects independently from concept to completion, comfortable managing timelines, priorities, and stakeholder communication without close supervision. Strong written and spoken English, proactive follow-through, and consistent use of coordination and tracking tools to keep work organized and visible.

PROJECT COORDINATION EXPERIENCE

IT Support Intern (486 hours)

Aretex, Makati, Philippines

- Monitored company email traffic in Microsoft Defender for phishing and anomalous activity, escalating flagged threats to the team lead.
- Reviewed and triaged IT support tickets, coordinating with the team lead on assignment and, at times, assigning tickets directly.
- Migrated IT asset records from spreadsheets into Jira Assets and worked on light automation to streamline lifecycle tracking.
- Set up and reformatted company laptops, including Windows 11 deployment, BIOS level configuration, updates, and installing applications needed by the company or employee.
- Tracked and managed the full range of company assets, including laptops, monitors, and peripherals, maintaining accurate in and out records as items were issued, returned, or reassigned.
- Bound user accounts to devices in JumpCloud and ran existing automations/scripts to manage account status, with account changes made under the team lead's permission.
- Logged and maintained accurate records of 486 internship hours using the team's Google Sheets tracker, keeping supervisors updated with reliable, up to date visibility.

INDEPENDENT PROJECT OWNERSHIP

Self-directed software projects, scoped and delivered end to end without a team or supervisor

- GanApp (event management app): defined the project scope, prioritized features, and worked through the full build. When PDF generation broke, redesigned the flow around a PNG-to-PDF conversion so the deliverable still shipped correctly, a practical example of adjusting a plan when the original approach hit a wall.
- Inventory Ticketing System (prototype): planned and structured the project's licensing approach, phasing it to move from an open license toward a commercial one once production-ready, showing forward planning beyond just the build itself.
- Consistently set and met self-imposed deadlines across multiple projects, tracking scope and progress independently, the same discipline needed to run a project or coordinate one for someone else.

ORGANIZATIONAL LEADERSHIP

- Vice President, Peer Facilitator Group, Partido State University (2022 to 2023), coordinating schedules and communication among student volunteers.
- Representative, Nextgen Information Technology Enthusiasts (NITE), Partido State University (2022 to 2024).

SKILLS & TOOLS

- Project coordination: scope definition, prioritization, timeline tracking, stakeholder communication.
- Google Workspace (Sheets, Docs, Calendar) for tracking, reporting, and coordination.
- Fast learner with new software and tools; picked up ticketing and asset management platforms like Jira Assets and JumpCloud on the job.
- Clear written and verbal English communication with both technical and non-technical stakeholders.
- Detail-oriented documentation and record-keeping; comfortable managing recurring, structured workflows (rotas, queues, tickets).
- Git, GitHub, VS Code.

EDUCATION

Bachelor of Science in Information Technology

Partido State University, Goa, Camarines Sur, Philippines

- Dean's Lister
